leukotomies are performed on patients with severe mental illness, particularly schizophrenia, to reduce the need for medication and improve cognitive function. [2] Leukotomy is a surgical procedure that involves the removal of a portion of the brain's white matter, specifically the corpus callosum, to reduce the flow of information between the two hemispheres of the brain. This procedure is often performed on patients with severe mental illness, particularly schizophrenia, to reduce the need for medication and improve cognitive function. [2]
